

INCREASING GENDER DIVERSITY AMONG STUDENTS IN PHYSICS

PANELLISTS

Gillian Butcher

University of Leicester, UK

Tegan Clark

Australian National University and IncludeHER, Australia

Margaret Samiji

University of Dar Es Salaam, Tanzania

CHAIR

Manjula D. Sharma

The University of Sydney, Australia

PANEL DISCUSSION

Getting a good gender representation in physics courses, amongst both high school, university and pre-service teacher students, is a perennial problem. But does this apply to every country? Questions this panel will address are:

- Is obtaining a good gender representation more of a problem in developed countries?
- Which courses have the largest and smallest gender disparities?
- Are there examples of successful initiatives to improve the gender balance?

This panel will explore the country context of gender differences and brainstorm what we can learn from each other.
