KEYWORDS: pre-service teacher education, inquiry processes, authentic science, on-line learning resources

ABSTRACT
A project funded by the Federal Enhancing the Training of Mathematics and Science Teachers program that is working with scientists, mathematicians and educators to develop inquiry-based modules to build the competencies of teacher education students.

THE ISSUE
Building on-line STEM-focussed modules that engage and inspire primary teacher education students.

THE APPROACH
Modules build on project partners’ experience with innovative, integrated content (e.g. Macquarie University’s Big History Institute) and authentic student-led investigation (e.g. Space2Grow). The outcome will be an integrated resource that could support a science and mathematics specialisation in the undergraduate primary teacher education program.

Proceedings of the Australian Conference on Science and Mathematics Education, Curtin University, Sept 30\textsuperscript{th} to Oct 1\textsuperscript{st}, 2015, pages 82, ISBN Number 978-0-9871834-4-6.
